

AI & AUTOMATION STRATEGY · SPECIALLY CURATED

Run smarter. *Day and night.*

Six tools, phased over twelve weeks, get you your evenings back — and put the books, the quotes, and the receivables on a tight loop without you typing a single line.

Pacific Coast Plumbing

DELIVERED

12 May 2026

REFERENCE

DHC-2026-0044

From reactive operations to a scalable, AI-enabled business.

You told us you want to grow to fifteen staff without you being the bottleneck on every job. You also told us, plainly, that you're doing books at the kitchen table on Sunday night. This report is about closing the gap between those two sentences.

Right now, your business works — but it relies heavily on your time. Leads don't consistently come to you. Admin work slows you down. Key processes depend on manual effort, which limits how much you can grow without working more hours.

This report shows you how to fix that.

By implementing a small, carefully selected tool stack and introducing targeted automation, you can:

- Recover 20–30 hours per month
- Reduce manual admin and follow-ups
- Shift from outbound chasing to inbound demand
- Create systems that run even when you don't

IN PRACTICAL TERMS

Most businesses at your stage unlock \$1,900–\$5,700 per month in time value within the first 30–60 days.

This is not a generic audit. This is a clear, step-by-step plan for running your business with better systems, better tools, and AI support that earns its place.

Six tools, phased over twelve weeks, do most of the work. We've leaned toward provider-vetted defaults and integrations that don't need glue layers — your tech appetite is medium and we respect that.

The numbers on the next page are conservative ranges based on Fair Work AU 2026 rates. The point is not that you'll hit every dollar, every month — it's that the headroom is real, and the path to capturing it is clear.

KEY BENEFIT • 01

12-15 hours back, monthly

Re-typing job sheets into MYOB on Sunday night disappears. Apprentices stop losing notes. Worth \$600-1200 to you at owner-operator rates.

KEY BENEFIT • 02

Receivables tightened to 14 days

Chaser automates the polite-but-firm payment follow-ups. Industry average for trades drops 30 days when this is wired right. That's \$30-45K of working capital unlocked on a \$1M turnover.

KEY BENEFIT • 03

\$184/month total software cost

Lean stack — each tool earns its keep. Detail in section 07. No spend until a tool's first job is queued up.

If you do nothing else, do these first.

These five changes deliver the fastest return with the least effort.

01

Move to ServiceM8 for job and dispatch management

Stop losing job sheets to the back of the ute

→ Every job tracked from quote to invoice in one place

02

Migrate from MYOB to Xero

End Sunday-night re-typing at the kitchen table

→ Books reconcile automatically, weekends back

03

Move to professional email on Google Workspace

Stop sending quotes from a gmail.com address

→ Higher quote-to-close conversion, instant credibility

04

Connect Stripe for card payments

Stop chasing payment by phone for two weeks

→ Customers pay the invoice the same day

05

Automate receivables with Chaser

Stop being the bad guy chasing overdue invoices

→ Average days-to-pay drops from 45 to 14

These five steps alone remove your biggest operational bottlenecks and create immediate momentum.

What you should expect in the first 30–60 days.

Once the foundation is implemented, here is what changes.

TIME SAVINGS

Hours back in
your week.

20–30 hours per
month recovered

Reduced admin,
follow-ups, and
duplication

IMPROVED CONSISTENCY

Things stop
falling through.

Leads tracked
properly

Clients onboarded
smoothly

Contracts and
communication
standardised

INCREASED DEMAND

Inbound replaces
chasing.

More inbound
enquiries

Less reliance on
cold outreach

ESTIMATED MONTHLY VALUE

\$1,150 – \$2,800 per month, plus \$30–45K of working capital released in the first year in recovered time and efficiency.

Most clients at your stage recover the \$880 engagement fee within the first 30 days through admin time saved alone — receivables compression is upside on top.

What each move is worth, in hours and dollars.

Conservative ranges. Owner-operator at \$60-120/hr, qualified tradesperson at \$50-80/hr, apprentice at \$25-40/hr.

THE CHANGE	HOURS SAVED · MONTHLY	DOLLAR VALUE · MONTHLY
Paper job sheets → ServiceM8 digital Apprentices stop losing notes	8-12 hrs	\$400-960
Manual re-typing → ServiceM8 → MYOB sync Sunday-night books retired	12-15 hrs	\$720-1800
Email chase → Chaser automation Plus 30-day receivables reduction	3-5 hrs	\$30-45K WC freed once
<i>Time and admin recovered, monthly</i>	<i>23-32 hrs</i>	<i>\$1,150-2,800/mo + \$30-45K once</i>

Hours estimated from your D-Manual self-report (12 hrs/wk re-typing) and AU industry benchmarks. Dollar values use Fair Work AU 2026 hourly rate bands. Working capital release assumes a \$1M annual turnover with trade-average 45-day to 14-day receivables shift.

The snapshot. Verbatim from your questionnaire.

YEARS OPERATING

CUSTOMERS PER WEEK

~30

STATED GOAL

"Grow to fifteen staff without me being the bottleneck on every job. Stop doing books at the kitchen table at night."

PAIN NARRATIVE

"Owner doing books at night. Apprentices losing job notes. Receivables stretching to 45 days. We've started losing quote competitions to faster competitors."

HATED WEEKLY TASK

"Re-entering Friday's job sheets into MYOB on Sunday night."

FUTURE STATE VISION

"I want my evenings back. I want apprentices to know what jobs they have tomorrow without asking me. I want quotes to go out the same day instead of three days later."

TECH COMFORT

Medium

AI READINESS

Open to it if you can show it works.

The minimum credible foundation.

Six tools, ordered by phase. Each one earns its keep against a specific phrase in your questionnaire.

4.7 What we left out — and why

-
- **No CRM (yet)** — ServiceM8 holds customer history — a dedicated CRM is wasted spend at your volume.
 - **No e-sign tool** — Quotes go through ServiceM8 'Approve' button. DocuSign is overkill until you're contracting on retainer.
 - **No marketing automation** — Word-of-mouth is your engine. Mailchimp can come later when you have 200+ customers to email.
-

How the tools work together.

Each block hands off to the next. ServiceM8 captures the job, Xero handles the books, Stripe handles the card, Chaser does the chase, Calendly opens the booking door. Workspace is the spine.

Twelve weeks, in phases.

Each phase ends with one capability fully live before the next is touched. No big-bang switch-overs.

Week 1 — Foundations — Workspace and Xero

- Sign up for Google Workspace Business Starter at workspace.google.com
- Configure hello@pacificcoastplumbing.com.au, set up email signatures with logo
- Migrate from MYOB to Xero — import last 12 months of transactions
- Set up the chart of accounts to match your job types

Week 2 — ServiceM8 live and apprentices on it

- Sign up for ServiceM8 Growing plan at servicem8.com
- Add 5 staff licences and load the team
- Walk Friday morning toolbox meeting through the app — first jobs entered live
- Wire ServiceM8 ↔ Xero native integration; first invoices syncing

Week 4 — Stripe and Chaser — receivables on autopilot

- Connect Stripe to Xero — card payments accepted from invoices
- Configure Chaser Starter — three-touch reminder cadence at 7, 14, 30 days
- Set up branded Calendly link for quote-walk bookings
- Standardise quote templates in ServiceM8 with your top 10 job types

Week 6 — Stability check — paper retired, books reconciled

- Last paper job sheet entered; legacy MYOB read-only
- 60-day Xero reconciliation — books match bank, every transaction coded
- First Chaser cycle complete — measure days-to-pay vs baseline
- Apprentice retrospective: what's working, what isn't, what we missed

Week 12 — 90-day review and prep for Batch 01 digital employees

- Pull the 90-day numbers: hours saved, dollars captured, days-to-pay
- Scope Batch 01 of digital employees (see section 08) — pick the first one to build

- Tighten the rough edges — quote templates, Chaser tone, ServiceM8 categories
- Decide which Batch 01 agent goes first; book the discovery session

What the recommended stack costs.

Recurring software

TOOL	TIER	MONTHLY COST (AUD)
Google Workspace Business Starter	x6 users	\$60/mo
Xero	Grow	\$70/mo
ServiceM8	Growing (5 staff)	\$95/mo
Chaser	Starter	\$50/mo
Stripe	Per-transaction	Variable
Calendly	Free	\$0

Total recurring *\$275/mo + Stripe variable*

Where the stack grows once you're ready

TRIGGER	WHAT COMES NEXT	ADDITIONAL COST
15+ staff	ServiceM8 Premium	\$175/mo (+\$80)
Adding a second branch	Xero Comprehensive	\$135/mo (+\$65)

Rogue Night can implement this for you

Data migration, account setup, configuration, integrations, process design, scoping. **What we don't do:** hands-on team training. We provide written guides and pointers to official video training, plus availability for questions during the first month at no extra cost.

Implementation quote provided on request — book a walkthrough to scope.

Three batches, scored on impact and readiness.

Nine agents, picked from a wider library and ordered into three phases. Batch 01 deploys on the Week 12 stack with no further foundation. Batch 02 needs the stack mature and a few months of history. Batch 03 is emerging upside — high ceiling, more setup.

BATCH 01 · DAY 90

High impact, ready now.

These agents are designed to deploy on the Week 12 stack. They don't need months of accumulated history or new infrastructure beyond what the rollout has put in place. Discovery, build, and supervised deployment still happen — but pay-back is measured in months, not years.

PAIN MATCH · MANUAL DATA ENTRY · PRIMARY

Data-Sync Specialist

Replaces: Re-typing job sheets into MYOB · Saves ~12-15 hrs/mo · Worth \$720-1,800/mo
· Ready · Week 12 stack — ready

Watches your ServiceM8 jobs and your Xero accounts; pushes line items from one into the other the moment a job is marked complete. No more Sunday-night re-typing. No more apprentices forgetting to file a docket.

Ties to: “Re-entering Friday's job sheets into MYOB on Sunday night” — your hated weekly task

PAIN MATCH · INVOICING · SECONDARY

Receivables Specialist

Replaces: Manual chase emails on overdue invoices · Saves ~3-5 hrs/mo + cash recovered · Worth \$30-45K WC freed · Ready · Xero + Chaser Live (Week 6)

Pairs with Chaser. Drafts the polite-but-firm follow-up, escalates the tone on schedule, posts the matched payment back to Xero when it lands. Average receivables window drops from 45 days to 14 in trades.

Ties to: "Receivables stretching to 45 days" — your pain narrative

PAIN MATCH · LEAD TRACKING · SECONDARY

Quote Builder

Replaces: Three-day quote turnaround · Saves ~4-6 hrs/mo · Worth \$240-720/mo + win-rate uplift · Ready · ServiceM8 templates live (Week 4)

Pre-fills ServiceM8 quotes from site-visit notes and your standard line items. You scan, adjust, send — typically within the hour the apprentice gets back to the depot.

Ties to: "We've started losing quote competitions to faster competitors" — your pain narrative

BATCH 02 · DAY 180

High impact, foundation needed.

These agents need the Week 12 stack to mature — a few months of customer history, a phone line connected, or a second tool wired in. High-impact when ready, but ship them too early and they don't have enough to work with.

PAIN MATCH · LEAD TRACKING · PRIMARY

Lead Follow-up Specialist

Replaces: Quotes that go cold after no reply · Saves ~6-8 hrs/mo · Worth \$300-600/mo + 10-15% quote win uplift · Ready · 3+ months of CRM history

Knows which quotes haven't converted. Drafts the soft nudge at 7 days, the comparison-prompt at 14, the price-walk at 30. You stay in the conversation without remembering every name.

Ties to: "Quotes go out three days later" — your future state vision

PAIN MATCH · OWNER BOTTLENECK · PRIMARY

Phone Reception Specialist

Replaces: Calls you miss because you're on a job or after hours · Saves ~8-12 hrs/mo of your time + revenue from missed calls · Worth \$400-1,200/mo + recovered revenue · Ready · Voice platform wired, FAQ knowledge base curated, ServiceM8 booking integration

Takes inbound calls when your line is busy or after hours. Answers the standard questions from your curated FAQ, books emergency callouts straight into ServiceM8, and routes anything it can't handle to your mobile with the full call context already typed up. You stop missing calls. You stop being on call.

Ties to: "After hours" – your preferred call time, which tells us your phone is always on

PAIN MATCH · REPUTATION · EMERGING OPPORTUNITY

Review-Request Specialist

Replaces: Word-of-mouth left to chance · Saves ~2-3 hrs/mo · Worth \$200-500/mo from increased lead flow · Ready · ServiceM8 customer history mature

Fires a Google review request 24 hours after a job is marked paid. Personalises by job type. Industry-average for plumbing trades is 3% conversion — once you have 150 jobs/quarter, that's 4-5 new five-star reviews a month, compounding the next quarter's leads.

Ties to: "Grow to fifteen staff" – your stated goal

BATCH 03 · DAY 270

Emerging upside.

Higher ceiling, more setup. These agents either need the full stack mature plus six months of data, or they unlock strategic decisions rather than weekly time savings. Worth keeping on the horizon — not worth rushing.

PAIN MATCH · OWNER BOTTLENECK · EMERGING OPPORTUNITY

Profitability Analyst

Replaces: Gut-feel pricing decisions · Saves ~Strategic insight, not direct hours · Worth \$2,000-5,000/mo in margin from better pricing · Ready · 6+ months Xero + ServiceM8 history

Reads every closed job in ServiceM8 against the Xero line items and tells you which jobs, which customers, which suburbs, which job types are actually paying your bills. Your gut probably knows; this gives you the receipts.

Ties to: “Without me being the bottleneck on every job” – your stated goal

PAIN MATCH · LEAD TRACKING · EMERGING OPPORTUNITY

Pricing Optimiser

Replaces: Stuck-pricing on competitive quotes · Saves ~Strategic insight, not direct hours · Worth \$1,000-3,000/mo in margin lift · Ready · 12 months of won/lost quote data

Tells you, by job type and customer profile, where you have pricing power and where you're leaving money on the table. The Quote Builder shapes the input; the Pricing Optimiser shapes the rate card.

Ties to: “Losing quote competitions to faster competitors” – your pain narrative

PAIN MATCH · OWNER BOTTLENECK · EMERGING OPPORTUNITY

Phone Agent Swarm

Replaces: A single phone agent that's hit its complexity ceiling · Saves ~16-24 hrs/mo of owner and team phone time · Worth \$1,000-3,000/mo + faster routing means more revenue captured · Ready · Phone Reception Specialist proven, call-type segmentation captured, CRM mature enough to support routing

Specialised siblings take different call types — emergency dispatch, scheduling, billing inquiries, quote follow-up. Each one knows its lane. They route to each other when a caller needs a different lane, and they only hand a call to a human when context demands it. Worth doing once the single Phone Reception Specialist has proven the pattern and you can see exactly where the call volume splits.

Ties to: “Grow to fifteen staff without me being the bottleneck on every job” – your stated goal

Hours and dollars shown are conservative starting estimates — actual numbers depend on how each agent is used once live. We review every agent at the end of its batch before starting the next; if one isn't earning its keep, we stop and rethink rather than compound the spend.

Rogue Night can build and deploy these for you

Discovery, build, supervised deployment, handoff, and monitoring. You can engage Batch 01 standalone, see results, then commit to the next batches. **What we don't do:** replace your team.

Implementation quote provided per batch — book a walkthrough to scope.

Three doors.

01. Feel strongly about something? We'll amend the report.

This report is yours. If something doesn't fit your business — a tool you've already tried, a phase that doesn't make sense, a number that feels off — tell us, and we'll revise. Free of charge. The \$880 covers the work, including refinement.

02. Engage Rogue Night for the implementation.

Fixed-fee, fixed-scope. Quote provided after a scoping call. We handle setup, configuration, and integration; you keep the customers, the calls, and the cash.

03. Take the report and run it yourself.

The recommendations are vendor-neutral. The \$880 has covered the work.
